Vision

Our planet powered by sustainable resources.

Mission

Shape our future with smart technologies for global resource sustainability and climate challenges.

About NRG Systems

NRG Systems revolutionized the way wind resource assessment was done more than 35 years ago. Today, this heritage of innovation informs everything the company does. NRG Systems is dedicated to designing and manufacturing smart technologies for a more sustainable planet—that is why the company's product line has grown to include tools for a range of wind, solar, and meteorological applications.

The NRG team is driven by a common set of values. The company supports like-minded nonprofit organizations, champions climate change awareness through education and activism, and incentivizes employees to lessen their carbon footprints. In 2018, NRG self-certified to the ISO 14001:2015 Environmental Standard to further enhance its environmental performance.

Products

NRG Systems serves multiple stages of wind and solar energy project development and provides tools for a range of atmospheric remote sensing applications. The company's remarkably user-friendly sensors, measurement systems, and remote sensing solutions are currently being used by electric utilities, turbine OEMs, project developers, research institutes, and government agencies in more than 170 countries.

Company Leadership

Justin Wheating
President
